| Comparison | Meta-feature | Feature family | Direction of difference | Median (error) | Median (success) | Effect size | p-value | q (per-family BH-FDR) | n (error) | n (success) |
|---|---|---|---|---|---|---|---|---|---|---|
| **Rule: On ventilator; Synthetic liver dysfunction** *(n err: 34, n suc: 27)* | | | | | | | | | | |
| NM advantage—survivors | Input character count | Density | Higher in error | 8.688 | 8.597 | 0.091 | 0.015 | 0.045 | 34 | 27 |

Note: q-values are Benjamini–Hochberg adjusted within each (comparison, rule, feature family). When the family size m=1, q equals p; with small m, the worst-ranked test can also have q=p due to the monotone step.
